

GHG accounts

1. The GHG emissions cover Recharge AS, including subsidiaries in Sweden, Finland and Denmark. Consolidation is based on the operational control approach. The GHG inventory is prepared in accordance with the GHG Protocol. For our communicated GHG targets, we apply market-based Scope 2 emissions.

2. Recharge does not own or lease any vehicles and has no stationary combustion sources. We have a limited number of switchgears containing SF6. These are monitored, and emissions will be reported if and when leakage occurs.

3. The emission factor for electricity in Norway is sourced from NVE. AiB are used for the remaining Nordic countries, for both location-based and market-based calculations. Electricity consumption in our Norwegian offices is based on activity data, while emissions from our Swedish and Finnish offices are estimated based on headcount due to limited data availability.

We purchase Guarantees of Origin (GoO) for all electricity consumption.

4. The reported figures are based on a combination of activity data from suppliers and estimates. These figures may change in future reporting periods as data quality improves.

5. Emissions from capital goods mainly relate to chargers. Emissions are reported in the year the asset is activated. Emission factors are primarily based on available Environmental Product Declarations (EPDs), specific for our largest and most mature suppliers. These figures may change in future reporting as data quality improves.

6. The category has been assessed as not relevant based on our current business model. This assessment may change in the future.

7. Emissions associated with waste handling from our offices. Data for Norway is based on activity data provided by the landlord, while data for the other Nordic countries is estimated based on headcount.

8. Reported figures are based on statistics for travel behaviour in Norway and DEFRA emission factors.

9. Emissions from electricity and heating related to common areas in our offices. Heating is based on advanced bio-oil and therefore has an emission factor of 0 gCO₂ per kWh. Data for Norway is based on activity data from the landlord, while data for the remaining Nordic countries is extrapolated.

10. Recharge purchases renewable energy certificates for all energy sold through our network.

11. Emissions associated with end-of-life treatment of assets are currently being assessed and will be reported in future disclosures.

12. Market-based Scope 2 emissions are used.

Greenhouse gas emissions ¹	Unit	2022	2023	2024	2025
Direct emissions (Scope 1)²	tCO ₂ equivalents	0	0	0	0
Diffuse and fugitive emissions (SF6)	tCO ₂ equivalents	0	0	0	0
Stationary combustion	tCO ₂ equivalents	0	0	0	0
Mobile combustions	tCO ₂ equivalents	0	0	0	0
Indirect emissions (Scope 2)³					
Market based	tCO ₂ equivalents	0	0	0	0
From offices	tCO ₂ equivalents	0	0	0	0
From losses in chargers	tCO ₂ equivalents	0	0	0	0
Location based	tCO ₂ equivalents	127	191	213	140
From offices	tCO ₂ equivalents	1	2	1,5	1
From losses in chargers	tCO ₂ equivalents	126	189	211	139
Other indirect emissions (Scope 3)					
Category 1 ⁴ - Purchased goods and services	tCO ₂ equivalents	1 014	949	636	288
Category 2 ⁵ - Capital goods	tCO ₂ equivalents	6181	6 995	1 873	558
Category 3 ⁶ - Supply chain emissions from fuel consumption	tCO ₂ equivalents	Not relevant	Not relevant	Not relevant	
Category 4 - Upstream transport	tCO ₂ equivalents	Not reported	117	117	22
Category 5 ⁷ - Emissions generated from waste in own operations	tCO ₂ equivalents	Not reported	0,18	0,15	0,12
Category 6 - Business travel	tCO ₂ equivalents	17	26	31	37
Category 7 ⁸ - Employee commuting	tCO ₂ equivalents	22	29	12	16
Category 8 ⁹ - Upstream leased assets	tCO ₂ equivalents	2	4	2	2
Category 9 ⁶ - Downstream transportation	tCO ₂ equivalents	Not relevant	Not relevant	Not relevant	Not relevant
Category 10 ⁶ - Processing of sold products	tCO ₂ equivalents	Not relevant	Not relevant	Not relevant	Not relevant
Category 11 ¹⁰ - Use of sold products	tCO ₂ equivalents	0	0	0	0
Category 12 ¹¹ - End of life treatment	tCO ₂ equivalents	Not reported	Not reported	Not reported	Not reported
Category 13 ⁶ - Downstream leased assets	tCO ₂ equivalents	Not relevant	Not relevant	Not relevant	Not relevant
Category 14 ⁶ - Franchises	tCO ₂ equivalents	Not relevant	Not relevant	Not relevant	Not relevant
Category 15 ⁶ - Investments	tCO ₂ equivalents	Not relevant	Not relevant	Not relevant	Not relevant
Total emissions¹²	tCO ₂ equivalents	7 235	8 121	2 672	922
